2011 (Monday - Friday)**

Time: 12:30-4:30 pm

Location: UA campus
College of Optical Sciences,
Meinel Building
1630 East University Blvd.

FREE Enrollment
Sponsored by:

Do you like science & math? Do you like high-tech gadgets? Then the Optical Summer Academy for Young Scholars (OSAYS) is for you! You will learn about optics—the science & technology of light. Optics isn't just telescopes and microscopes anymore—optics is an integral part of the technology used to view DVDs, make cell phone calls, take pictures, drive at night, save and share information on CDs, special effects for movies, virtual reality and more! Please come join us! Optics needs the best and brightest students to move scientific discovery and progress forward.

OSAYS students will learn about lasers, transmitting music through a light beam, view holograms, see images inside the human body, and meet students and faculty that enjoy sharing science! The experience will be hands-on and promote answering questions through experimentation.
